CLAIMS

1. A method of unlocking a hand-held electronic device, the device including a touchsensitive display, the method comprising:

detecting a contact with the touch-sensitive display at a first predefined location corresponding to an unlock image;

moving the unlock image on the touch-sensitive display in accordance with movement of the contact while continuous contact with the touch screen is maintained; and unlocking the hand-held electronic device if the moving the unlock image on the touch-sensitive display results in movement of the unlock image from the first predefined location to a predefined unlock region on the touch-sensitive display.

- 2. The method of claim 1, wherein the moving comprises movement along any desired path.
- 3. The method of claim 1, wherein the moving comprises movement along a predefined channel from the first predefined location to the predefined unlock region.
- 4. The method of claim 1, further comprising displaying visual cues to communicate a direction of movement of the unlock image required to unlock the device.
- 5. The method of claim 4, wherein the visual cues comprise text.
- 6. The method of claim 4, wherein said visual cues comprise an arrow indicating a general direction of movement.
- 7. A portable electronic device, comprising:

a touch-sensitive display;

memory;

one or more processors; and

one or more modules stored in the memory and configured for execution by the one or more processors, the one or more modules including instructions:

to detect a contact with the touch-sensitive display at a first predefined location corresponding to an unlock image;

to move the unlock image on the touch-sensitive display in accordance with movement of the detected contact while continuous contact with the touch-sensitive display is maintained; and

to unlock the hand-held electronic device if the unlock image is moved from the first predefined location on the touch screen to a predefined unlock region on the touch-sensitive display.

- 8. The device of claim 7, further comprising instructions to display visual cues to communicate a direction of movement of the unlock image required to unlock the device.
- 9. The device of claim 8, wherein the visual cues comprise text.
- 10. The device of claim 8, wherein said visual cues comprise an arrow indicating a general direction of movement.
- 11. A portable electronic device, comprising:

a touch-sensitive display;

means for displaying an unlock image at a first predefined location on the touchsensitive display while the device is in a user-interface lock state;

means for detecting contact with the touch-sensitive display; and

means for moving the unlock image on the touch-sensitive display in response to detecting the contact in accordance with movement of the contact while continuous contact with the touch screen is maintained; and

means for transitioning the device to a user-interface unlock state if the moving the unlock image on the touch-sensitive display results in movement of the unlock image from the first predefined location to a predefined unlock region on the touch-sensitive display.

12. A computer program product for use in conjunction with a portable electronic device comprising a touch-sensitive display, the computer program product comprising a computer readable storage medium and a computer program mechanism embedded therein, the computer program mechanism comprising instructions for:

detecting a contact with the touch-sensitive display at a first predefined location corresponding to an unlock image;

moving the unlock image on the touch-sensitive display in accordance with movement of the contact while continuous contact with the touch screen is maintained; and unlocking the hand-held electronic device if the moving the unlock image on the touch-sensitive display results in movement of the unlock image from the first predefined location to a predefined unlock region on the touch-sensitive display.
